github.com/AxelGeist | axelgeist.com

Profile: Communicative and detail-oriented Software Engineer with experience building scalable backend systems, observability tools, and developer platforms. Reliable, collaborative, and driven by a strong “get things done” mindset.

SKILLS

- Golang | Java | c++ | Python | Scala | JavaScript | TypeScript | React | Spring | Django | PostgreSQL | Linux | Bazel
- Docker | Kubernetes | Temporal | Key Vault | Datadog | Testing | Git | CI/CD | Distributed-Systems | Microservices
- German (native) | English (bilingual) | Dutch (B1) | French (A1)

EXPERIENCE

Software Engineer II	<u>Datadog</u>	Paris, France	12/2025 – present
Software Engineer I			08/2024 – 11/2025
Software Engineer Intern			06/2023 – 12/2023

- Built and maintained large-scale monitoring and reliability tooling for Datadog’s internal services.
- Designed and implemented backend services, including APIs, databases, and internal CLI tools
- Improved platform efficiency and reliability through codebase refactoring, configuration automation, and safe rollout processes.
- Collaborated cross-functionally to define requirements, write RFCs, and lead migrations for core infrastructure components.
- Contributed to postmortems, incident responses, on-call responsibilities, ops-reviews, and initiatives to enhance system resilience and developer experience.
- Implemented an API-Load-Testing service (backend & frontend) from scratch using Golang, TypeScript, React, Docker, Kubernetes, Bazel, Key Vault, Temporal, and internal services. This API-Load-Testing service was so successful that a dedicated team just for that tool has been created.

Software Engineer Intern	<u>Thales</u>	Delft, Netherlands	04/2023 – 06/2023
-----------------------------------	----------------------	--------------------	--------------------------

- Designed the backend architecture for a Secure Collaboration Platform for the Thales Security Operations Center (SOC), focusing on security.
- Implemented the UI of the Secure Collaboration Platform using JavaScript and React.

Software Engineer Intern	<u>Rohde & Schwarz</u>	Munich, Germany	07/2022 – 09/2022
-----------------------------------	-----------------------------------	-----------------	--------------------------

- Implemented dynamic charts via JavaScript, HTML, CSS, and Chart.js, to visualize real time & historical data and deploy it into Thingsboard.
- Implemented warning systems on real time data with Node-RED and tested them by simulating real time data via MQTT, CSV, and Docker.

EDUCATION

Master of Science	<u>Georgia Institute of Technology</u>	Atlanta, United States	08/2025 – present
• Major: Computer Science • Overall GPA: 4.0 / 4.0			

Bachelor of Science	<u>Delft University of Technology</u>	Delft, Netherlands	08/2021 – 06/2024
• Major: Computer Science & Engineering • Bachelor Thesis: "Multi-Task Offline Reinforcement Learning: Experimental Evaluation of the Generalizability of the Soft Actor-Critic + Behavioural Cloning Algorithm"			

Bachelor of Science	<u>Nürtingen-Geislingen University</u>	Geislingen, Germany	03/2017 – 10/2020
• Major: Real Estate Economics • Graduated top 5% - Honours Course			

Exchange Semester	<u>Royal Melbourne Institute of Technology</u>	Melbourne, Australia	07/2018 – 12/2018
• Overall GPA: 4.0 / 4.0 – Highest Honours
